All Orders Web give you and your customers instant access to the All Orders data anytime, anywhere using a web browser. Significantly improve customer service by allowing your customers to view stock availability, create quotes and orders and check on orders status.

allOrders Web

▪ **What is All Orders Web?**

All Orders Web is an e-commerce web site that shares a database with your All Orders program. All items, customers, quotes and orders that are created within All Orders will be instantly available within All Orders Web and visa versa! With All Orders Web you can:

- Create and edit customer accounts
- Search items including pricing and availability
- Create quotes or orders
- Convert a quote to an order
- View orders status and history

Works with kits and configurations !!!

▪ **Why use All Orders Web?**

Simple - improve customer service! How often do your customers call asking about pricing, stock availability or order status? Would it not save you time, aggravation and money if your customers can login to a secure web site and answer their own questions? Can you afford not to have All Orders Web?

▪ **What information can my customers see?**

All Orders Web has an administrative control panel in which you control which customers are allowed access to All Orders web and what they can see. They will only see their information, similar to the 'customer info' screen in All Orders. Moreover, pricing is customer specific so that price levels will be appropriately applied. You don't want your customers to view prices or quantities? No problem, use the administrative control panel to restrict their view.

▪ **Can company employees also login?**

Yes. Any user with an All Orders username can be granted access to All Orders Web.

▪ **Can I link it to my current web site?**

Yes. The great thing about the web is pages can be anywhere on the Internet yet appear to be part of the same site. So even if your informational site is hosted, your e-commerce can be on a completely different location.

▪ **Is it customisable?**

All Orders Web is written using ASP.NET and as such all the web forms are customisable. You can off course customise the look and feel, but you can also customise 'business rules' that are specific to your business. Customisation of All Orders Web requires intermediate to advanced knowledge of ASP.NET technology. NumberCruncher would be happy to discuss specific customisation needs.
